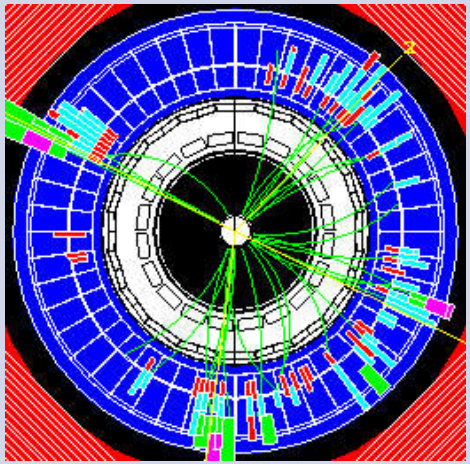
# GLAST - Gamma-ray Large Area Space Telescope

***A high-energy (0.01 - 300 GeV) gamma-ray facility that will observe relativistic jets from massive black holes and study the sources of cosmic gamma-ray bursts***

- **GLAST addresses high-priority objectives identified by science community (National Academy TGSAA, SEUS, GRAPWG)**
- **Mission is partnership of astrophysicists and particle physicists from 21 institutions worldwide**



Reconstructed $Z_0$ Event in SLD Detector
SLAC, Stanford University

- **Exploits state-of-the-art technology developed for colliding beam physics experiments**
- **50 times the sensitivity of GRO/EGRET**
